

Directions for using DiamaShine® Maintenance Diamond Floor Pads

DiamaShine® Diamond Floor Pads used daily will keep polished concrete, marble, and terrazzo floors looking like new and will provide long life if the following guidelines are followed:

- Use on autoscrubber or swing machine with orange colored diamond impregnated side facing down – number on back of pad should be facing up.
- Only use with pad drivers that have center locks. Never use under floor cleaning brushes.
- Always keep autoscrubber moving when pads are in contact with the floor- never stop without first lifting pads off the floor.
- Use light down pressure only – never use with extra down pressure.
- Always use with water – use adequate water, the same or slightly more than you use with red floor pads or brushes.
- Clean after each use – remove pads from autoscrubber and rinse with water, heavy soil accumulation may be removed by lightly scrubbing with a brush.
- Avoid excessive scrubbing of the pads, damage and short life may result.
- Never use outdoors, on broom finished or stamped concrete, or on any concrete that is not hard troweled or polished - short life may result.
- Avoid dock plates, metal studs, pipes caps protruding above the floor and other objects that may damage pads.
- DiamaShine® Pads effectively clean without chemicals except for greasy or oily stains. If cleaners are needed, always test cleaner full strength in a hidden location. If cleaner damages the shine, do not use.
- Pads are worn out when they no longer effectively clean the floor.
