

DIAMASHINE®

2-Step Concrete Floor Maintenance System

The DimaShine 2-Step concrete floor maintenance system for previously polished concrete floors uses just two pads to clean and keep polished floors looking like new for pennies per square foot per year. No chemicals, including cleaning chemicals are typically needed, except for greasy or oily floors.

DIAMASHINE® M3

Use the DimaShine M3 pad for everyday cleaning and maintenance in place of regular floor cleaning pads on your autoscrubber or floor machine for daily cleaning. Very fine diamond abrasives clean better than any regular floor pad or brush. The diamond abrasives are formulated to microscopically hone the surface, removing as little as possible to maintain the original shine and clarity of the polished concrete.

Over time wear from sand and dirt embedded in the soles of shoes will make microscopic scratches on any polished floor. High traffic floors are particularly prone to dulling over time, especially in action alleys, checkout and the store entrance, even when properly maintained.

DIAMASHINE® RestoreX™

When the surface shine and clarity have dulled to the point where regular use of the DimaShine M3 is no longer sufficient, replace the DimaShine M3 pad with the DimaShine RestoreX pad and make several passes over the dulled areas. Do not be concerned if you do not see immediate improvement. The RestoreX pad's job is remove the damage and to prepare the surface for the DimaShine M3 pad, which when used immediately after the RestoreX pad will restore the gloss and clarity of the floor.

Always follow the guidelines in DimaShine Diamond Floor Pads for proper pad use.
